the field of counseling and psychotherapy has for years presented the puzzling spectacle of unabating enthusiasm for forms of treatment whose effectiveness cannot be objectively demonstrated with few exceptions statistical studies have consistently failed to show that any form of psychotherapy is followed by significantly more improvement than would be caused by the mere passage of an equivalent period of time despite this practitioners of various psychotherapeutic schools have remained firmly convinced that their methods are effective many recipients of these forms of treatment also believe that they are being helped the series of investigations reported in this impressive book resolve this paradoxical state of affairs the investigators have overcome two major obstacles to progress in the past lack of agreement on measures of improvement and difficulty of measuring active ingredients of the psychotherapy relationship the inability of therapists of different theoretical persuasions to agree on criteria of improvement has made comparison of the results of different forms of treatment nearly impossible the authors have solved this intractable problem by using a wide range of improvement measures and showing that regardless of measures used in different studies a significantly higher proportion of results favor their hypothesis than disregard it overall this book represented a major advance at the time of its original publication and is of continuing importance the research findings resolve some of the most stubborn research problems in psychotherapy and the training program based on them points the way toward overcoming the shortage of psychotherapists charles b truax is in addition to this book author of counseling and psychotherapy process and outcome the process of group psychotherapy relationships between hypothesized therapeutic conditions and intrapersonal exploration toward a tentative measurement of the central therapeutic ingredients and talking won t help a study of the process and outcome of psychotherapy with hospitalized schizophrenics robert r carkhuff is

this absorbing study examines the change in american relations with china after 1949 from hostility to rapprochement and to full normalization of the ties in 1979 rosemary foot goes on to examine the relationship after normalization a period when the united states has come to view china as less of a challenge but still resistant to certain of the norms of the current international order the book begins by examining us efforts to build and then maintain an international and domestic consensus behind its china policy it then looks at changing us perceptions of the capabilities of the chinese state it shows how american positions on chinese representation at the un and on the trade embargo were subtly eroded not least by changes in us domestic public opinion the author argues that previous explanations of american relations with china have dwelt too single mindedly on ideas associated with the strategic triangle and that instead we need to embed our understanding of the evolution of american relations with china within a wider structure of relationships at the global and domestic level reviews a valuable interpretative analysis of us people s republic of china relationships she substantially contributes to post soviet era theoretical understanding strongly recommended for courses in foreign policy diplomatic history and international relations choice contains much that is valuable to those whose interests are primarily on the other side of the pacific the chapter on american public opinion and chinese policy is also something which is not readily found in existing accounts of china a post 1949 foreign relations times higher
